

HEALTHCARE MANAGEMENT

The healthcare industry worldwide is facing great challenges in the current world. From drastic climatic change, war conflicts, lack of financing, great societal disparity and challenge to attract competent resources both professionals and management, this course will have a top-down look from a national level to organizational management level at the risks, vulnerabilities, opportunities and solutions.

Course Aims

This two-day course will look at the principles of Population Healthcare Management through a pro-active approach to handle health disparities, to help current and future professionals and policy makers to analyze the current challenges and design and implement strategic solution to regional and national healthcare systems

Course Objectives

- Learn to analyze healthcare systems and define vulnerabilities, risks and opportunities
- Learn the essentials of Population Health Management
- Learn the nature of healthcare plan impacts
- Achieve understanding of implementing an integrated management system into the regional/national healthcare systems
- Learn the fundamentals of an integrated management system in healthcare organizations
